Neptune - Bunker Info tab updates

Dmitry Kisil
Senior Loss Prevention Officer

The latest VPS bunker quality data for Aug 2022 – Jan 2023 has been updated.

A lot of HFO and MGO samples stemmed worldwide come off-specification on technical parameters. ULSFO samples fail on technical parameters and on Sulphur content more often than in the past. VLSFO quality is generally without major problems, but regularly fail on Sulphur content in ARA region.

Please visit the Bunker Tab on Neptune and check details and VPS bunker alerts.
