## Neptune. Bunker Info tab updates.

**Dmitry Kisil**  
Senior Loss Prevention Officer

***A regular 2-weekly update of the bunker quality data has been uploaded to Neptune.***

Notable elevated technical off-spec figures highlight potential issues with HFO orders in Rotterdam, Antwerp, and Panama Canal, and with ULSFO stems in Rotterdam, Antwerp, Skagen, and Tallinn. HFO bunkered in Singapore is generally on spec, however please be mindful that HFO contaminated by organic chlorides may still be present. Statutory Sulphur content in VLSFO is unlikely to be a problem in Busan, Fujairah, Shanghai, and Singapore. For detailed information, please log into Neptune and go to the Bunker Info tab.

Figures for the world's top ten bunkering ports provided by Veritas Petroleum Services are available online for 2020 – 2022. Data on other bunkering locations, on a specific historical interval, or on a particular quality parameter is available on request from Loss Prevention Department.
